## About Us:

We are **Food Tech Solutions LLC**, an american technology company specializing in innovative solutions for restaurants. We provide two main products:

**1. Dispute Dojo** – A full-service dispute management solution that helps restaurants recover lost revenue from fraudulent or incorrect order issues on delivery platforms like DoorDash, UberEats, and Grubhub. Our performance-based model ensures restaurants only pay when we successfully win back funds. Since we charge up to 25% of any lost revenue won back, you're protected by our 4X ROI Guarantee. Plus, pay nothing if you aren't happy with our service after your first 30 days.

**2. AI-Powered Restaurant Intelligence** – An advanced AI chatbot interface that acts as a personal knowledge assistant for restaurant teams. It ingests data from ordering systems, delivery platforms, staff scheduling tools, and more to provide real-time insights, recommendations, and ad hoc analysis. Whether used by kitchen staff, general managers, or owners, it ensures instant access to operational intelligence with expert recall of order details.

- Dispute Dojo recovers 60% – 90% of lost revenue from chargebacks (varies by order-issue rate).
- No risk: You pay only if a dispute is successfully won—no negative impact on your cash flow.
- Staff can upload additional evidence if the first dispute attempt is denied, ensuring every case is thoroughly contested.
- Recover funds for twice as many canceled orders by effectively disputing them with delivery platforms.
- Reverse chargebacks for courier-related issues. For example, a \$39.99 chargeback due to "Wrong Order Handed Off" can be reversed in many cases.
- 100% of orders are reviewed for potential fraud or unwarranted chargebacks.
